ESD

Electrostatic discharge (ESD) is the unwanted sudden flow of electricity between two electrically charged objects. ESD can cause a range of harmful effects as well as permanent damage to solid state electronic components

To solve this Euromex has introduced electrostatic protected microscopes in the NexiusZoom range. Special electrostatic dissipative paint eliminating harmful electrostatic discharges makes the microscope suitable for all static-sensitive environments. Ideal for all kinds of industry, inspection and assembly applications

illumination

Good illumination of an object is crucial for stereo microscopy. When the correct illumination is chosen the details of the observed object becomes more distinct. Comfort and desired light intensity are the factors that determine the choice

These multi-functional 150 Watt Halogen or 30 W power LED cold light sources guarantee users of the highest available light intensity. The light intensity is fully adjustable. Supplied without light guide (to be ordered separately)

LE.5212
The Euromex illumination station comes with independently controlled goosenecks, ring light and transmitted stage illuminator, making it a complete illumination solution. The base can be used as a stand-alone tabletop unit or it can be slid over a pole stand. The interchangeable 3W powerLED goosenecks allow flexible angle illumination, while the 24000 Lux ring light allows homogeneous illumination from above. The transmitted light stage illuminator (8000Lux) is designed for translucent objects

The Euromex HD cameras offer the perfect solution to modern microscopy where real-time images are needed. There is no longer a need for use of a computer, because the software is built into the camera and the image can be displayed on any HDMI screen. Save high resolution images and calibrated measurements directly from the camera onto the integrated SD card

HD CAMERAS

The cameras are equipped with high sensitive sensors for low and intense light conditions and are also suitable for coaxial illumination and machine vision applications. The real-time images generated with this camera provide excellent color rendering with frame speeds up to 60 fps
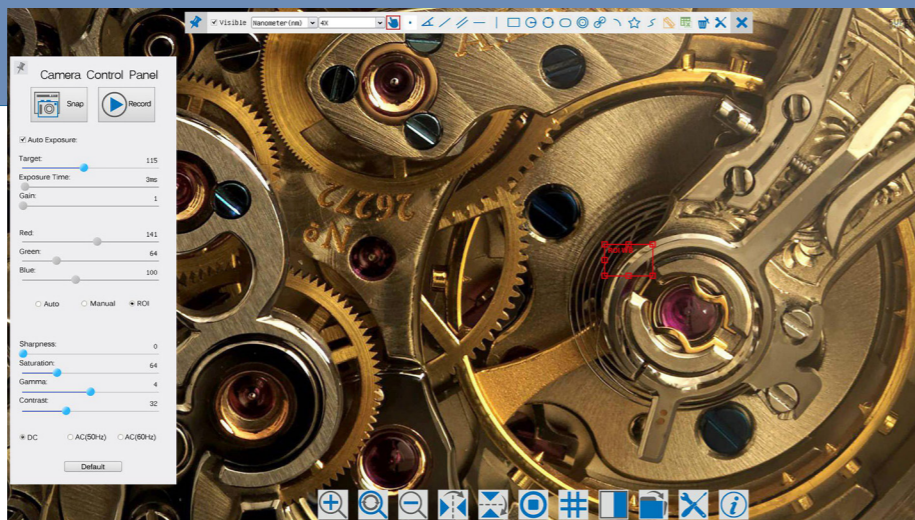

STAND-ALONE MODE

To use these cameras you do not need a computer or have any computer knowledge. Most camera settings are done automatically and therefore these cameras are very user friendly. This results in faster, more flexible and compact working conditions. Simply connect the camera to a high definition HD screen, HD TV with a HDMI input and the system is ready to go. The mouse-driven built-in software of the camera enables captured images and recorded videos (1) to be saved on the integrated SD memory card. Do you still prefer to work via your pc? No problem, just connect the USB cable and enjoy the ImageFocus image analysis software

The popular HD-Ultra and HD-Pro are two of the most popular cameras, the captured images or recorded video's can be very easily reviewed or replayed on the HD screen. Even a full range of calibrated measuring functions are included
